

VocTech Impact Fund 2018

Ufi works to raise UK skills levels by promoting innovative digital solutions for adult vocational learning.

Technology can transform how vocational learning happens and 'scale up' this impact to provide better, quicker, digital learning.

VocTech Impact funds large scale, near to market innovations which demonstrate how the use of digital tech can deliver adult vocational learning at significant scale.

We are looking for projects that solve practical learning problems, offering high quality learning solutions and producing tangible benefits to learners and employers in the project duration.

Projects that are thinking differently about how to use digital approaches to deliver effective learning at scale and innovative in their overall approach, their technology, or their target market.

**Call open from 13 June 2018
to 11 July 2018**

Funding of £150-£300,000 is available
for projects lasting 18-24 months

Open to all industries, sectors
and technologies.
